

LIFECYCLE POLICY

Consistent with a life cycle perspective, IPM Facilities will endeavour to:

- Establish controls, as appropriate, to ensure that its environmental requirement(s) is (are) addressed in the design (if applicable) and development process for the product or service, considering each life cycle stage.
- Determine its environmental requirement(s) for the procurement of products and services, as appropriate.
- Communicate its relevant environmental requirement(s) to external providers, including contractors.
- Consider the need to provide information about potential significant environmental impacts associated with the transportation or delivery, use, end-of-life treatment and final disposal of its products and services.

The organization shall maintain documented information to the extent necessary to have confidence that the processes have been carried out as planned.

Typical stages of a product (or service) life cycle include raw material acquisition, design, production, transportation/delivery, use, end-of- life treatment and final disposal. The life cycle stages that are applicable will vary depending on the activity, product, or service. (further guidance in the new Life Cycle Thinking)
